

Welcome

We made it!! Yes, Winter is finally going to give in and spring is right around the corner. Soon all the golf courses and patio's will be open, BBQ's will all be fired up and people will have smiles on their faces again, oh, I can't wait. Let's also not forget there are some positive signals to our economy and I am convinced that if we all focus on the positives and get back to business as usual this will all be in the past before you know it. We have some exciting things going on and are looking forward to a busy upcoming season, we hope you keep in touch and share some of your positive experiences with us.

What's Happening At Wecon Services On Going and Completed Projects

- The tear down and removal of an East end Clothing DC is now complete, they are up and running in their new facility. Any requirements for used conveyor or racking equipment?? We have tons.
- Distributor sales are very active, small stand alone units seem to have great application demand.
- Flexible conveyors have now been shipped to Singapore, that's a twist usually the containers are empty going that way.
- Fruits and vegetables are moving along a new system supplied all from used in stock equipment, we are noticing a trend in used equipment interest.
- Dorner low profile units are now being used in a few automation houses, these units are perfect for a large variety of applications.
- Custom heavy duty transfer tables and hydraulic lifts are now up and running in an Ottawa area manufacturing plant.
- Modifications are underway to enhance the recently commissioned automatic system for a local confectionary company.
- A new inter-floor conveyor is installed and running as expected in Eastern Ontario, there should be more to follow.

What's Happening At Wecon Services On Going and Completed Projects

- Manufacturing is complete and installation is scheduled for mid April for a new Military Airplane cargo handling system in Eastern Ontario.
- A new DC for photography equipment is ready for start up; we were also able to fulfill all the system requirements with in stock refurbished equipment, saving time and money.
- An automotive parts supplier in South Western Ontario continues to find ways to improve their material handling with equipment that we are always able to supply them with.
- The first of many units is ready to be delivered to an Ontario University technology center, this very specialized application will be used for a National energy program, specifically a Uranium pellet loading system.
- Phase two is already running at a fruit and vegetable growers facility in Southwestern Ontario.
- Plans are under way to install a new automatic in-motion weigh scale into a system installed last year for a Toronto cosmetics company.
- The installation of phase one is complete and the new pallet handling automatic transfer car is delivering pallets of margarine from the first couple of automatic palletizers to the automatic truck loading system as planned.
- All the planning is over and manufacturing has begun for a new 30 lane high speed sortation system to handle retail goods, installation of this new system is scheduled for late spring, watch for more information on this project in the near future.

New Stainless Steel Conveyor

AquaGard brings fastest speeds, best-in-class transfers and ease of automation to food industry. Dorner Mfg. Corp. now has the food industry covered, from processing to packaging.

Introducing **AquaGard™** – a new stainless steel conveyor that offers maximum flexibility for a wide variety of products and applications while increasing throughput and reducing product loss. The new platform was rigorously designed to deliver industry-leading speeds, best-in-class transfers and ease of automation to the bakery, snack food and confectionary markets.

However, AquaGard is also ideal for select applications within the fruit, vegetable, non-protein ready-to-eat, pharmaceutical, medical, and personal care markets.

We're very excited about AquaGard – no doubt about it. This really is the ideal platform for such a wide variety of food industry markets. Plus, AquaGard is a pre-engineered, standard product so it eliminates the cost, long lead times and risk associated with custom conveyors. We're committed to offering the easiest-to-order, easiest-to-accessorize and fastest shipping conveyors on the market.

Capable of sustaining speeds as fast as 260 feet-per-minute, AquaGard provides unmatched throughput to improve bottom line results. In addition, if product loss or transfers are a concern, the new platform offers one-inch nosebar tails for small part transfers, a powered transfer for maintaining speeds through transfers and a roller transfer plate, which provides smooth product transitions with only minimal added length.

When it comes to automation, few conveyors make it as easy as AquaGard. In fact, no drilling is required. A revolutionary bracket design makes it possible to add a variety of controls, including photo eyes, low voltage wires, air tubing and several guiding options in only minutes. An accessory bar can also be affixed quickly to add multiple components to a single side – or both sides – of the conveyor frame.

AquaGard is comprised of a TIG welded stainless steel frame with an open design and minimal horizontal surfaces. For added durability, the belt is supported by solid UHMW wear strips located in welded cross members. Welded, formed angle stands are also engineered to maximize space around the conveyor. All materials utilized for AquaGard are FDA approved and meet or exceed BISSC standards.

AquaGard is a modular plastic belt conveyor available in straights, curves, inclines and declines. A variety of belt options are also available, including open mesh, closed top and cleated belts, which can be selected based on a customer's specific needs.

New Stainless Steel Conveyor —continued

Belts for AquaGard are available in widths from four to 36 inches and in lengths ranging from just three feet all the way to 83 feet. As part of the company's long-standing dedication to speed and flexibility, units can ship within 10 working days (for straights). Curved conveyors ship within 15 days.

For additional details about AquaGard, please call Wecon at (905) 624-6499 to request a free sales brochure.

Contest Corner

Here's a puzzle to test your ability to find a pattern and test it against more data. In this table, each row across follows the same pattern of numbers. See if you can discern the pattern and fill in the missing number in the bottom row.
