Welcome

To the first 2009 edition of What's happening at Wecon Systems "WHAWS". As we turn the page on 2008 and look forward to 2009, we should all reflect on the past year and some of the positives of what can only be summed up as an interesting year. We here were extremely fortunate to close out the year going in the right direction and are anticipating a very exciting year ahead of us with a couple of projects already under way and a couple of other ones winding up, we hope 2009 will be a prosperous year for all of our WHAWS friends.

What's Happening At Wecon Services On Going and Completed Projects

- Enclosed track garment hanging conveyors are installed and running in a new dry cleaning facility in Toronto
- A new pharmaceutical filling and check weighing system is installed and will be running in early January
- Our new line of low profile conveyors from Dorner manufacturing is starting to take off as expected
- A corrugated handling facility is now using a new air operated lift/turn table all designed and built in house
- Manufacturing is under way for an automotive parts supplier in Mississauga all equipment will soon be installed and running
- Truck parts are now running on a newly installed system here in Mississauga
- A new worldwide apparel distribution center is up and running in Richmond Hill, Ontario. The system included everything from single selective racking to a multi level pick tower as well as carton flow, a conveyor picking system and a trash handling system. This was the largest project of its kind in Richmond Hill and we were proud to be a large part of it
- Record storage and management is made easier with the use of some simple improvements we were able to provide to a very large records management company right here in Toronto
- Laundry sorting is made easier with the use of a new manual sorting loop we were able to supply and install for a large linen processing house, it is so simple yet so effective

- A national clothing and work wear retailer has relocated it's Western Canadian operation to a larger facility. We were able to redesign, remove, transport, reinstall, rewire, reprogram, start up and commission the new system in the new location in less than two weeks! With some strategic planning this all was able to take place with almost no interruption to the day to day operations
- Another mail sorting facility will be using a newly supply and installed inter-floor conveyor to assist in their operation allowing us all to keep receiving all those Christmas bills (sorry)
- All the changes and testing is completed and the new fully automated package handling and palletizing system is ready to be put into full operation at an International confectionary plant located here in Toronto
- Some new equipment is already installed and running with more on the way for an automotive parts supply company in south western Ontario, this new equipment will be used to enhance the system installed last year
- Changes are under way for a local manufacturer of butter and margarine products here in Toronto, some of the changes will include a new pallet transferring system and relocation of an automatic trailer loading system
- A major automotive parts supplier in Western Canada will soon have changes to their existing conveyor system in order to help streamline order picking and sortation operations as volumes are expanding in their business
- A major health care supplier now has a fully automated packing system all designed and built in house
- As always our service department is busy but will always find time to service our valuable customers
- Our valued Distributors have been very active in all fields and as always we are always there to assist in any way possible
- Our used equipment department has been extremely busy filling orders with some in stock equipment that is always able to help in cost savings
