WELCOME

To the fourth and final edition of What's Happening at Wecon Systems "WHAWS" newsletter for the year 2013. The transition from summer to fall is now upon us with each day visibly growing shorter as the nights become longer. The autumnal equinox otherwise known as the first day of fall (autumn) has come and gone. Our grass and gardens have welcomed the cooler weather and intervals of rain that we have experienced. With the change in seasons, trees have begun and continue to change colors. As the summer draws to a close and the kids have gone back to school, we take a moment to look back.

This past summer our installation and service crews continued to keep busy. A slower pace in the shop allowed us to decrease manufacturing lead times and provided us with the opportunity to purge our used equipment inventory and determine what equipment we really have on hand. As the fall progresses, we look forward to getting back into a regular routine. As always, we continue to direct and manage our manpower requirements to best satisfy our customer's needs. We are fortunate that our team is comprised of a diversified group of individuals that can be called upon to help out during those busy times to keep up with our customer commitments.

The workload over the next few months continues to be very busy. If you have any upcoming projects we would be happy to discuss the opportunities with you or your prospective client(s). If you have a question or inquiry, don't hesitate to call. Please remember, we can always find the time to support your day-to-day needs and requirements.

WHAT'S HAPPENING AT WECON SYSTEMS

On Going and Completed Projects

- We most recently endured a couple of weekend sessions at a book distribution facility reconfiguring some of the customer's existing equipment and installing a complement of new equipment supplied by one of our major business partners TGW Systems. Wecon was utilized to supply the installation services and expertise in support of the project coordinated by TGW Systems.
- Locally we are installing a new mezzanine and conveyor system at a used clothing recycling facility. Wecon designed and manufactured the custom chutes utilized in this application.
- Our installers continue to provide installation support for our customer at a juice and bottling facility here in Toronto.
- Lights, camera, action! Wecon was contacted and supplied a conveyor to a local film company for a television show for one of this season's episodes.
- We maintain a wide assortment of good quality of used equipment that is available for sale. By providing customers with the option of supplying used equipment in lieu of new equipment the customer can realize the benefit of significant cost savings over the purchase of new equipment. Since used equipment changes hands in support of customer requirements, if you are looking for that special piece of equipment or simply just looking for something to help enhance your productivity please contact us for details and equipment availability.
- Our team of sales staff and distributors continue to be busy quoting and actively pursuing new business opportunities. If you have a question or inquiry, please give them a call. They can be reached at Wecon Systems by calling (905) 624-6499 or alternately they can be contacted via e-mail at:

NEW PRODUCTS

One of our major business partners, Ryson International Inc. has just introduced a solution for multi-tiered production flow. The solution, a Multiple Entry Spiral allows products of uniform sizes and weights to merge and enter a spiral conveyor from different elevations. This is accomplished with a high speed induction conveyor that provides controlled entry of the product on to the spiral. The conveyor belts are individually adjustable to match the spiral pitch. These induction conveyors provide traffic control and are utilized to prevent products colliding and maintain product orientation as it enters the spiral conveyor from the different levels. Spiral conveyors convey product in a continuous flow, facilitating high throughput. Due to their modular design, we ship most spirals in one piece, pre-assembled and pre-tested which reduces time and costs associated with installation. If you have a question, please give us a call and we would be happy to discuss how we can satisfy your material handling needs and requirements.
